Aznaur Arkelov

Data Analyst · Moscow, Russia

aznayr.arkelov@mail.ru · Telegram: @joi1111 · +7 000 000-00-00

SQL / Python · metrics and KPIs · self-service analytics · BI / DWH · ClickHouse / MSSQL

Data analyst with 3+ years of experience. I run my own reporting workstream in the shipping division: I gather requirements from business stakeholders, shape the backlog, design data marts and take solutions to production.

I have built 20+ dashboards and maintain 15+ of them on a regular basis; more than 50 employees use these solutions.

I migrated management reporting to self-service. I use an internal LLM to speed up analytical tasks and to prepare documentation.

SKILLS

- **Data analytics** — KPIs and KPI framework design, segment analysis, hypothesis testing, identifying drivers of growth and decline, data-driven recommendations for the business, managing the analytics backlog
- **Data and BI products** — the full analytics product cycle: requirements gathering, data mart design, dashboards, rollout to production, support, self-service access for business teams, improving reporting UX
- **SQL and Data Quality** — ClickHouse, MSSQL, PostgreSQL, DWH, complex SQL queries, metric calculation and validation, data quality control, documentation of calculation logic
- **Tools** — Python, pandas, Jupyter, Apache Superset, DataLens, Tableau, Excel, DBeaver, internal LLM (faster analysis, documentation)

EXPERIENCE

RUSAL — Data Analyst, BI

December 2023 – Present · Moscow, Russia

One of the world's largest aluminium producers; analytics for the transportation business line — shipment of raw materials and metal.

Stack: SQL, ClickHouse, MSSQL, Apache Superset, DBeaver, Python, Data Quality

- Built a monitoring system for financial and operational KPIs: 20+ interactive Superset dashboards with metrics for profit, costs, profitability, freight rates and market indices; I maintain 15+ of them on a regular basis
- Migrated management reporting to self-service: 30 active users in my own business line and 23 on adjacent projects gained direct access to key metrics and now make decisions without manual requests to analysts
- Initiated a rate comparison product and took it to production: from an Excel prototype and validating the idea with the stakeholder to collecting data via API, normalizing sources and building data marts in ClickHouse
- Deepened segment analysis: breakdowns by vessel type, contract type and route made it possible to pinpoint the least efficient segments and explain how individual factors contributed to financial results
- Standardized metric calculation: created a single methodology for financial and market indicators and documented the logic for adjacent teams, eliminating conflicting interpretations of the data
- Ensured data quality: SQL queries in ClickHouse and MSSQL, reconciliation of data marts against sources, checks for row loss in joins and for category completeness before data reaches dashboards
- Sped up analytical processes with an internal LLM: I use it for routine analysis and data preparation tasks, and for creating and keeping up to date the documentation of metric calculation logic

Atom Media Group — Data Analyst / Marketing Analytics

January 2023 – December 2023 · Moscow, Russia

Analytics of the market, the competitive landscape and advertising campaign performance.

Stack: SQL, ClickHouse, DataLens, Tableau, Excel, Python

- Automated recurring reporting: replaced manual calculations with BI tables and dashboards, cutting the effort managers spent preparing analytics by 70%
- Calculated and validated marketing metrics: CPA, CPC, LTV and other performance indicators in SQL, with cross-system data accuracy checks
- Launched BI reporting on ClickHouse: administered DataLens and Tableau, configured data refreshes and monitored data quality
- Integrated external sources for market analytics: Brand Pulse, Media Scope, SimilarWeb and open data for market and competitor analysis
- Supported advertising strategy decisions: dashboards, presentations and recommendations for internal stakeholders based on competitive and historical analysis

EDUCATION

- **MIREA — Russian Technological University** — Bachelor's degree, Software Engineering, 2023
- **Yandex Practicum** — Data Analyst, 2023
